

Discover Science

“Hands on” learning for curious minds

One of our more popular clubs, Discover Science is all about exploration and investigation. Each week children are engaged in fun, practical experiments that help them to develop knowledge and understanding of HOW things work, and WHY things happen.

In any given week, your child will be exploring and investigating one of these fascinating topics; plants, bubbles, light, volcanoes, energy, heat, sound, oceans space, weather, water, gravity, air, magnets, nutrition, senses, temperature, flight, hibernation, bugs, colour, music... and much, much more!

Benefits of hands on science learning:

- ✓ forced to think by requiring interpretation of the observed events
- ✓ interpret data, often with various and differing interpretations
- ✓ practice cause-and-effect thinking
- ✓ question observed events and the resulting data
- ✓ rely less on authority and more on practical experience
